

$$1) \int_C (x dx + y dy) \text{ mit } C: x^2 + y^2 = a^2$$

Via Stelling van Green bewijzen we: $\iint (1 + 1) dx dy$

$$= 2 \iint dx dy \rightarrow \text{surface of circle, use polar notation}$$

$$\rightarrow \text{but using } (x, y) \rightarrow \boxed{2 \cdot \pi \cdot a^2}$$

using polar coordinates

$$(x, y) \rightarrow (a \cos \theta, a \sin \theta)$$

$$\int a \cos \theta \cdot a \cos \theta - (a \sin \theta \cdot (-a \sin \theta))$$

$$= \int (a^2 \cos^2 \theta + a^2 \sin^2 \theta) d\theta = \boxed{2\pi a^2}$$
